ABOUT THE CONFERENCE

The 21st Century is witnessing an explosion of knowledge, especially the information technology which has enhanced access to information worldwide. The impact of this globalization of information has produced significant transformation in various industries like agriculture, medicine, business engineering and especially education. It has also transformed the nature of education and role of the academician in teaching - learning process. There is a dire need for the constant upgrading and modernization of the knowledge, skills and understanding required by academicians. This has clear implications for the content and methodology of academician education. Academician education must evolve new pedagogies and tools to assist the academicians for learning basic skills and competencies to cope up with the new roles assigned to them. It is, therefore, essential that there should be a major reorientation of academician education to prepare the academicians for their new and diversified functions within and outside the four walls of the school. Significant transformations in industry, engineering, agriculture, business, medicines and other fields have taken place. There are various emerging trends and paradigms in the field of education. It is the prerogative of academician education courses to prepare competent academicians in consonance with the dynamic education system, keeping in consideration concepts such as blended learning, flipped classrooms, and constructivist approach to teaching and learning among others. During the past decade, education and higher education systems have dramatically changed. They are a major factor in shaping the new global economy and producing rapid changes in society. They also have the potential to transform the nature of education: where and how learning takes place and the role of students and academicians in the teaching-learning process. Higher education systems must provide leadership and evolve new pedagogies and tools for learning. They should also provide leadership for designing how new technologies can be best used. To accomplish these goals, academician education institutions must work closely with academicians and administrators at the state or national levels, educational agencies, academician unions, corporate houses and community organizations, politicians and other stakeholders.

OBJECTIVES OF CONFERENCE

To establish a platform where different researchers and scholars from education and its related disciplines can share their thoughts and views.

To investigate the research works and classics whose framework and philosophies have shaped the educational theories and practices.

To familiarize the participants with these fundamental pillars of teaching and learning.

To provide a more widened spectrum for future research and teaching.
